

## AP Calculus Summer Review on WebAssign

There are 3 topics to this review:

1. Algebra
2. Trigonometry
3. Graphing Calculator

Algebra and Trigonometry skills are a very large part of the study of Calculus. You cannot have great success in Calculus without very strong Algebra skills.

On the second day of school, September 14, 2021, there will be a summer review assessment. The assessment will cover all 3 topics of this review. Copying this review from another student will not help you because this part will not be graded, only checked for completion. The results on your assessment will indicate how prepared you are for AP Calculus.

Web Assign will provide you with solutions to these problems. I can answer any questions you may have. You may use any assistance you want to help complete the review, YouTube, etc. E-mail me at [smondella@schools.nyc.gov](mailto:smondella@schools.nyc.gov) if you need more help. I cannot promise an immediate response, but I will get back to you.

We will use the TI-84 calculator in Calculus AB. A TI-83 is comparable but may not have 100% of functionality that the TI-84 has. The TI-89 and the Casios are cool, but colleges are discouraging their use because they do “too much.”

I applaud you if you are taking this class. It is not easy and will require hard work and **EXCELLENT ATTENDANCE**. The benefits from taking this course, or any other college-level course are immeasurable. Talk to any first-year college student and they will tell you how glad they are that they took this course. Put in the effort, work hard. There is no way to fake this class. I look forward to working with you and helping you as much as I can.

Mr. Mondella, AP Calculus
